- This submission contains 'in confidence' material and cannot be loaded on the ANMAC website.

Dear ANMAC,

Thank you for the opportunity to submit a response for the Midwifery Accreditation Standards Consultation Paper 3.

QUESTION 1

The educational preparation for prescribing outlined in the draft accreditation standards will prepare graduates to safely prescribe scheduled medicines within the scope of midwifery practice. Please indicate your agreement/disagreement with this statement using the following options. Yes/ No Unsure/other. Where possible please provide a rationale to support your response.

Yes.

Prescribing is an advanced skill that requires a depth of knowledge across multiple competency domains. The standards as written provide a good foundation for prescribing practice, however explicit reference to medication safety (an Australian and Global Health priority) is required to prepare graduates for safe prescribing. Please consider the following change in wording:

Standard 3.5: The program's content and subject **performance** outcomes incorporate the competencies in the NPS: National Prescribing Competency Framework in alignment with the Midwifery Standards for Practice (NMBA, 2018).

Medication Safety is an Australian national health priority, and the World Health Organisation (WHO) has identified 'Medication Without Harm' as a theme for the third Global Patient Safety Challenge 2017-2022. Consider specific reference to medication safety:

knowledge and skills in pharmacotherapeutics and quality use of medicines, **with a strong focus on medication safety.**

Standard 5.2 - The program's subject learning outcomes, with associated subject assessments, are clearly mapped to the NMBA Midwife standards for practice and NPS: National Prescribing Competency Framework.

Assessments include:

- a) appraisal of competence in pharmacotherapeutics, **medication safety**, administration, supply and the quality use of medicines

QUESTION 2

Do the draft accreditation standards cover the required knowledge, skills and attitudes to ensure that the graduate meets the NMBA Midwife standards for practice?

I believe the draft accreditation standards are a comprehensive set of standards of practice, although the following points could be reviewed and included. Currently there is no information about the importance of learning about essential skills required for the full scope of midwifery practice. In order for midwives to provide autonomous care with the scope for practice it is important that midwifery students are taught to assess the perineum following birth and develop skills to suture the

perineum. I suggest that the following information from the previous 2014 standards should be included in these standards:

“Simulation as an educational method can provide learning conditions to develop competency in less common clinical practice areas such as maternity and neonatal emergencies, vaginal breech births, perineal infiltration and episiotomies. It may also be used to develop foundational skills including, but not limited to, venepuncture, cannulation, catheterisation, perineal repair and interpretation of fetal heart patterns.”

The phrase “that focuses on woman-centre care” could also be included into the standard 3: Program of study under point 3.5:

f. integrated knowledge of care across the childbearing continuum **that focuses on woman-centred care** within the scope of midwifery practice including:

QUESTION 3

Please provide any other feedback about the content of the draft standards.

The current draft standard states:

3.12 The program includes: a. theory and practice that is integrated throughout the program

The information from the previous 2014 standards seems to be omitted from the current draft midwifery education standards and I would suggest ensuring they are included:

“Theory and practice are integrated throughout midwifery programs **in equal proportions (50 per cent theory and 50 per cent practice or a minimum of 50% practice).**”

I confirm my support to retain the 10 continuity or care experiences and 30 normal births and that no further amendments are made to this requirement. Midwifery must have a separate identity and autonomy within schools and faculties as reflective of the separate and autonomous identity of the midwifery profession.

The Current Consultation Paper 3 Document states:

2.2 The education provider conducting the program has a governance structure that ensures the head of discipline is a midwife registered with the NMBA, with no conditions or undertakings on their registration relating to performance or conduct and holds a relevant post-graduate qualification. The head of discipline:

- a. is appointed at a senior level and can demonstrate active, strong links to contemporary practice
- b. has responsibility for academic oversight of the program
- c. promotes high-quality teaching and learning experiences for students to enable graduate competence
- d. ensures staff and students are adequately indemnified for relevant activities undertaken as part of program requirements

As midwifery programs often are located within larger schools or units there needs to be stronger support in the standards for midwives to be contributors to governance structures at a broader level as decisions are often made about midwifery programs without direct midwifery input. As such the following changes to the wording of standard 2.2 are recommended:

2.2 The education provider conducting the program has a governance structure that recognises the autonomous identity of the profession of midwifery. The structure facilitates the direct input of the Discipline Lead of Midwifery (or delegate) into committees and processes directly or indirectly impacting on the midwifery program.

The head of discipline:

- a. is a midwife registered with the NMBA, with no conditions or undertakings on their registration relating to performance or conduct**
- b. holds a relevant post-graduate qualification**
- c. is appointed at a senior level and can demonstrate active, strong links to contemporary practice has responsibility for academic oversight of the program
- d. promotes high-quality teaching and learning experiences for students to enable graduate competence
- e. ensures staff and students are adequately indemnified for relevant activities undertaken as part of program requirements

Otherwise, I support the changes to the standards and believe they facilitate the education of a holistic midwifery practitioner whilst meeting the needs of the safety of the consumer, external stakeholder partnerships, educational, student and assessment components.

QUESTION 4

Are there further issues that should be addressed in the revision of the Midwife Accreditation Standards that have not been discussed so far in the consultation process?

No.

QUESTION 5

Any additional feedback?

No.

Date: August 7, 2020
